Hold down brackets are used to attach the bottom of the blind to a window or door to prevent it from swinging to and fro. There is a small hole on either end of the bottom bar. The hold down bracket is attached to the door with two screws then the tips of the brackets are inserted to the holes on the bottom bar.

STACKING HEIGHT

The stacking height of a blind refers to the measurement from top to bottom when the blind is fully pulled up. These stacking heights should be treated as advice only. There is a slight variance in the slat thickness and in how the slats pack with the ladder therefore each individual blind will be different.

BLIND DROP (MM)	STACKING HEIGHT (MM)
500	55
750	60
1000	70
1250	75
1500	85
1750	90
2000	100
2250	105
2500	110
2750	120
3000	125
3250	135
3500	140

CHILD SAFETY

All Alumitex® venetians are child safe compliant. All blinds come with a breakaway safety tassel, cord stop rings and 2-piece cleat. The safety cleat is used to wrap the cord around to keep out of children's reach.

CORD LENGTHS & INSTALLATION HEIGHTS

- If the installation height is known, the distance from the floor to bottom of pull cords shall be at least 1.5m.
- If the installation height is not known but the drop of the blind is less than 2.5m, the length of the pull cords shall be less than 1m.
- If the installation height is not known but the drop of the blind is more than 2.5m, the length of pull cords shall be less than drop of the blind minus 1.5m.

BLIND TYPE	MINIMUM CONTROL LENGTH (MM)	DEDUCTION MADE WHEN INSTALLATION HEIGHT PROVIDED (MM)	MIMUMUM INSTALL HEIGHT (MM)
25mm Aluminium	150	1500	1650

For example: For a 25mm Aluminium blind which has an installation height of 3000mm the controls will be 1500mm. Note the wand will be made to the same size as the cords.

Aluminium blinds are produced within a tolerance of +/-3mm width and +/-5mm drop
